FY26 Launches

Building Design:

Announcement Title:

An easy-to-use detailed building design solution with automated design tools and integrated analyses – *Shall we update this? Took it from the [website](#)*

Title approved for external usage: (Y/N)

Y – *But to check with Ben if we change the above*

Owner:

Please add only one SME who will be the main contact for the keynote team

Arne Bjelland

Readiness: (General Availability or Beta/Tech Preview)

Tech Preview

Release Date:

Please only include announcements that will be released within approx. 6 months after AU (i.e. by early April 2027)

Global Launch 2026

Description

Please include a MAX. of 3-4 sentences describing the new solution or capability. Include why it's important to our customers / what customer problem(s) it solves

A pioneering cloud-based solution set to transform the building design landscape. As part of the Forma industry cloud, Forma Building Design empowers project leaders, CAD, and BIM architects to create detailed building models with speed and precision. The solution combines easy-to-use modeling tools, generative AI, and real-time analysis to cater to users of all skill levels. Whether you're shaping facades, exploring plans, or optimizing performance with carbon and daylight metrics, Forma Building Design allows you to design with intent and deliver with impact.

Differentiation Score (1 = Expected / incremental, 2 = Notable, 3 = Big news / live demo-worthy)
3 – was demoed live last year at AU

Customer Impact Score (1 = Strong for a niche segment, 2 = Strong for a core segment, 3 = Step-change for large customer base)

3

Audience Breadth Score (1 = Single role, 2 = Multiple roles / one industry, 3 = Multiple roles / cross-industry)

2

Strategic Alignment Score: (1 = Weak tie to priorities, 2 = Clear tie to one priority, 3 = Clear tie to multiple priorities)

Priorities: Industry Cloud/Platform, AI, Convergence

3

Related to Industry Cloud / (Y/N)

Y

Related to AI (Y/N)

Y

Related to Convergence (Y/N)

Y – in the sense of early design moving to detailed design

Related to other strategic priorities

If the announcement isn't related to any of the priorities listed here, please add additional areas here

Prioritization Notes

Please add any additional considerations that should be factored into the prioritization of an announcement here

Board for Build

Announcement Title:

Title approved for external usage: (Y/N)

Site Design 2.0

Announcement Title:

To be worked on

Title approved for external usage: (Y/N)

Once Announcement title has been developed we need to check with Ben

Owner:

Please add only one SME who will be the main contact for the keynote team

Catharina Lundby

Readiness: (General Availability or Beta/Tech Preview)

General Availability

Release Date:

Please only include announcements that will be released within approx. 6 months after AU (i.e. by early April 2027)

April 2026

Description

Please include a MAX. of 3-4 sentences describing the new solution or capability. Include why it's important to our customers / what customer problem(s) it solves

Forma Site Design 2.0, a reimagined early-phase site layout experience featuring intuitive modeling tools, smart automations, and BIM intelligence from day one. Site Design 2.0 introduces major new capabilities, including: 2D Site Exploration, AutoCAD integration, Smart terrain, New vegetation system, Constraint-based automations. By combining manual sketching with intelligent, intent-aware behaviors, Forma enables site elements—like roads, buildings, terrain, and parking—to adapt automatically.

We have upgraded Forma Site Design with new core site layout capabilities. The new experience features foundational new modeling workflows. Built on a BIM logic, terrain, buildings, roads and vegetation adapt to each other, helping teams design more efficiently. The new modeling experience also includes a strong focus on 2D drawing and providing intuitive and automated paths from 2D to 3D. Easy-to-use manual drawing tools are further supplemented with smart automations, target validation and improved analysis workflows, helping design professionals make informed decisions.

Initial steps have also been taken to expand Forma Site Design into land development. Initially, this means supporting larger sites and providing site work tools relevant for early-stage engineering use cases, including smart terrain and grading optimization.

Differentiation Score (1 = Expected / incremental, 2 = Notable, 3 = Big news / live demo-worthy)

2

Customer Impact Score (1 = Strong for a niche segment, 2 = Strong for a core segment, 3 = Step-change for large customer base)

2

Audience Breadth Score (1 = Single role, 2 = Multiple roles / one industry, 3 = Multiple roles / cross-industry)

2

Strategic Alignment Score: (1 = Weak tie to priorities, 2 = Clear tie to one priority, 3 = Clear tie to multiple priorities)

Priorities: Industry Cloud/Platform, AI, Convergence

3

Related to Industry Cloud / (Y/N)

Y

Related to AI (Y/N)

Y

Related to Convergence (Y/N)

Y in the sense that it is connecting early site design to detailed design. Connecting different steps in the AEC process.

April 2027

Description

Please include a MAX. of 3-4 sentences describing the new solution or capability. Include why it's important to our customers / what customer problem(s) it solves

Autodesk is announcing a major expansion of Forma with new capabilities built for Land Development, giving civil engineers and site designers powerful early-phase tools directly in the cloud. Customers can now work on larger sites, evaluate grading, and site layout options in minutes, significantly reducing downstream risk and speeding up decision-making. Use the new Forma Street Design to explore urban street concepts, bridging the word of site, buildings and streets. These capabilities integrate with Civil 3D, enabling teams to move between desktop and cloud while maintaining engineering accuracy and precise coordinate systems.

Forma for Data Centers

Announcement Title:

Connecting Podium's purpose-built Data Center design automations right into Forma Scenarios.

Title approved for external usage: (Y/N)

Owner:

Please add only one SME who will be the main contact for the keynote team

Kasper Herlov

Readiness: (General Availability or Beta/Tech Preview)

Tech Preview, most likely.

Release Date:

Please only include announcements that will be released within approx. 6 months after AU (i.e. by early April 2027)

TBD, but very likely before april 2027.

Description

Please include a MAX. of 3-4 sentences describing the new solution or capability. Include why it's important to our customers / what customer problem(s) it solves

Data Centers are moving away from being utilities to becoming critical infrastructure, a part of our fabric which can't be built in isolation. Whether you need to fit capacity into an existing site, connect to the grid, optimize sun for heat and solar panel potential, or limit carbon emissions, building data centers efficiently rely on many tools across phases. That's why we are proud to bring Podium into the Forma Industry Cloud, connecting Podium's purpose-built Data Center design automations right into Forma Scenarios, not as an extension or plugin, but at the heart of AEC data model in Autodesk. This enables you to design, refine and take-off your project based on the same underlying data as everyone else in the Forma Cloud, reducing the risk of miscommunication, data loss, and not least, losing valuable time in the race to build the infrastructure for the AI revolution. [imagine all this with a french accent. Wow.]

Differentiation Score

(1 = Expected / incremental, 2 = Notable, 3 = Big news / live demo-worthy)

2

Customer Impact Score

(1 = **Strong for a niche segment**, 2 = **Strong for a core segment**, 3 = **Step-change for large customer base**)

1

Audience Breadth Score

(1 = **Single role**, 2 = **Multiple roles / one industry**, 3 = **Multiple roles / cross-industry**)

2

Strategic Alignment Score:

(1 = **Weak tie to priorities**, 2 = **Clear tie to one priority**, 3 = **Clear tie to multiple priorities**)
Priorities: Industry Cloud/Platform, AI, Convergence

2

Related to Industry Cloud / (Y/N)

Y, yes.

Related to AI (Y/N)

Mmmm, maybe? ML at least...

Related to Convergence (Y/N)

???

Related to other strategic priorities

If the announcement isn't related to any of the priorities listed here, please add additional areas here

Data centers be like :fire:

Prioritization Notes

Please add any additional considerations that should be factored into the prioritization of an announcement here

This depends on a) our rolling out Scenario API and increased AECDM/DS capabilities, plus b) Podiums ability to make use of them (in due time).

At this point, no monetization model is decided in any way. It doesn't seem likely this would be decided at the time of announcement either as Podium is still experimenting with their own pricing.

Option to connect to a customer case eg SSOE part of Podiums lighthouse program using the in-development Forma extension for data center.
